

Smart maintenance

Complexity made manageable

Innovative, intuitive & interactive

- Easy to use
- Valuable functions for your maintenance operations
- User-friendly, no training required

High degree of data integrity

- End-to-end encryption: data are https-encrypted from user interface to server
- User-specific environment
- German data servers, hence subject to German data protection law

Reports and analyses of permanent value

- Filters for task overviews
- To-do and other tasks are clearly displayed
- Condition monitoring
- Optimised use of personnel

Your benefits at a glance:

- **A single tool** for managing all resources and maintenance tasks relevant for production
- **Mapping of the whole production structure** including all maintenance components
- **Comprehensive documentation** of all maintenance tasks performed and information relevant to the machines
- **Compliance with maintenance periods!** This assists with audits and legal conformity.
- **Independent on platform**, no installation required
- Use extendable to **several sites**

your global specialist

Get ready for Industry 4.0.

Use the EfficiencyManager to optimally manage maintenance and assets

The software solution for planning your maintenance and assets

The solution matching your requirements

Maintenance management in your plant is increasingly becoming more of a challenge: tighter schedules and optimised maintenance intervals are to be met as well as legal and documentation requirements. All this calls for more efficient processes and optimised planning.

Industry 4.0 means: complexity in your machine pool and of your maintenance tasks is increasing. The EfficiencyManager helps you to ideally structure your tasks so you have full control of everything!

Transparency throughout

The EfficiencyManager offers you many options to increase efficiency in your production. It provides you with a transparent overview of your potential for optimisation. Potentials for increasing efficiency can be ideally multiplied, e.g. in the form of energy efficiency projects, the optimisation of spare parts life or the reduction of defects and hence maintenance activities.

What we build on: several decades of providing services

In view of these requirements, professional, software-based maintenance management is the obvious solution. For the development of our EfficiencyManager, we have been drawing on decades of experience in numerous, highly varied industries so that we can now offer you a solution tailored to the requirements of production and maintenance operations.

Preventive management leading up to Industry 4.0

With the aid of an advanced maintenance management system you can keep track of your assets and plan maintenance and repair tasks with anticipation. This helps improve your production planning, extend machine runtimes and prevent unplanned downtime.
